

SnapT — Accessibility Statement

Effective date: [Insert date] **Contact:** hello@snaptcarib.app

SnapT is for everyone, and we want the app to be usable by everyone — including people who rely on assistive technologies like screen readers, or who need larger text, higher contrast, or reduced motion.

Our commitment

We aim for the SnapT mobile app to conform to the **Web Content Accessibility Guidelines (WCAG) 2.1 Level AA** as applied to mobile applications, and to work well with the accessibility features built into iOS and Android, including:

- Screen readers (VoiceOver on iOS, TalkBack on Android);
- Dynamic type / system font scaling;
- Sufficient color contrast, with meaning never conveyed by color alone;
- Touch targets sized for comfortable use;
- Reduced motion preferences.

Where we are today

SnapT is a new product, and we are honest about being early in this work. We are actively testing the app with assistive technologies and addressing issues as we find them. Known limitations at this time include: [list current known gaps once an accessibility pass has been done — e.g., specific screens not yet fully labeled for screen readers].

Alternatives while we improve

If any part of the app is not accessible to you — including booking a session, managing a booking, or contacting support — email us at hello@snaptcarib.app and we will complete the task with you directly, at no disadvantage in pricing or priority.

Feedback

If you encounter an accessibility barrier in SnapT, please tell us at hello@snaptcarib.app. Include the screen or task, your device and OS version, and the assistive technology you use, if any. Accessibility reports go to our product team and genuinely shape what we fix next.

Review

We review this statement, and our accessibility progress, at least [annually].
